Architecture Constraints

There are a lot of constraints that makes us work harder to make a good application.

Technical Constraints

Code	Restricction	Motive
TC001	Program language: JavaScrip or TypeScript	We have chosen this language, but we don't have enough knowledge about this languages.
TC002	Frameworks: Angular	We haven´t worked with this framework before, so we will have to learn how to use it.
TC003	Online independence: no central control of data	Linked-data are completely decentralized and fully under users' control rather than controlled by other entities.

Organizational Constraints

Code	Restricction	Motive
OC001	About Version Control: Git, Tool: Github	Keep a version of the project after making changes
OC002	6 person group	We didn't know each other
OC001	Time schedule	We don't have a lot of time for developing the app. Furthermore, we are developing other proyects at the same time.

Conventions Constraints

Code	Restricction	Motive
CC001	Language	English. The project and the corresponding blog targets an international audience, so English should be used throughout the whole project.
OC002	6 person group	We didn't know each other
OC001	Time schedule	We don't have a lot of time for developing the app. Furthermore, we are developing other proyects at the same time.
